

Feedback

1. Data amount is not enough after this stage.

2. Yet implement complicated way of training

Project topic

Use DL / DRL model to predict risk of disease

Planned work

1. Federated Learning Simulation

(1) Core task

(2) challenge (Non-IID)

2. DRL Agent Implementation

(1)

Achievement (so far)

1. NHANES Data Materialization

(1) Data collection

(2) work flow

(3) Labeling

(4) Result (clean dataset)

2. Preliminary Model Simulation (Diabetes)

(1) Architecture

(2) Algorithm

(3) Result (success make 95% Accuracy)

(2)

Output demo

1. Data processing

2. Simulation Training & Curve Analysis
